

DP-601 : Implement a Lakehouse with Microsoft Fabric

Exercise 4 : Ingest data with a pipeline in Microsoft Fabric

- Create a workspace
- Create a lakehouse
- Create a pipeline
- Create a notebook
- Modify the pipeline

DP-601 : Implement a Lakehouse with Microsoft Fabric

➤ Create a workspace

Create a workspace

Workspace type ⓘ

What a user can do in a workspace depends on the individual user license(s) assigned to that user and the workspace type. [Learn more](#)

Power BI only workspace types

Power BI workspaces only support the use of Power BI capabilities.

DP-601 : Implement a Lakehouse with Microsoft Fabric

Create a notebook

The screenshot displays the Microsoft Fabric notebook environment. The interface includes a top navigation bar with 'Notebook 3', 'No label', and 'Saved' status. A search bar is present on the right. The left sidebar shows the 'Explorer' pane with 'Data items', 'Resources', and 'Connections' tabs. Under 'Data items', the 'OneLake' section is expanded, showing 'etl_LH' and 'dbo' folders. The 'sales' table is highlighted. The main area shows a PySpark notebook with the following code:

```
1 from pyspark.sql.functions import *
2 df=spark.read.format('csv').option("header","true").load("Files/new_data/*.csv")
3
4 df=df.withColumn("year",year(col("OrderDate"))).withColumn("Month",month(col("OrderDate")))
5 df = df.withColumn("FirstName", split(col("CustomerName"), " ").getItem(0)).withColumn("LastName", split(col("CustomerName"), " ").getItem(1))
6
7 # Filter and reorder columns
8 df = df["SalesOrderNumber", "SalesOrderLineNumber", "OrderDate", "Year", "Month", "FirstName", "LastName", "EmailAddress"]
9
10 # Load the data into a table
11 df.write.format("delta").mode("append").saveAsTable(table_name)
```

Below the code, the execution results are shown: [2] ✓ 13 sec - Command executed in 13 sec 888 ms by DAG on 6/16/2026, 10:32:04 AM. The status is 'PySpark (Python)'. Below the results, the 'Spark jobs (7 of 7 succeeded)' and 'Resources' are listed.
